### Product Description

E NiCrFe 3 is a basic coated electrode which deposits an inconel type weld metal. The electrode is specially suited for welding of 9% nickel steels , joining dissimilar metals, joining of Ni-Cr-Fe alloy to themselves and to dissimilar materials, cladding and surfacing of parts subjected to corrosion and heat. The weld metal possesses excellent high temperature as well as sub-zero temperature properties.

### Product Description

ENiCrMo-10 Alloy C22 electrodes are used for the welding of nickel-chromium-molybdenum alloys as well as for overlay cladding on carbon, low alloy, or stainless steels. They are also used for dissimilar joints between nickel-chromium-molybdenum alloys and stainless, carbon, or low alloy steels. C22 offers excellent corrosion resistance in oxidizing as well as reducing media in a wide variety of chemical process environments. It also offers spectacular resistance to stress corrosion cracking, pitting, and crevice corrosion.

**Categories:** [Nickel Alloy Welding Electrodes](#), [Welding Consumables](#), [Welding Electrodes](#)

### Product Description

ENiCu-7 is a basic coated electrode depositing monel weld metal. Ideal for welding of monel to monel, Ni-Cu alloys to themselves, Ni-Cu alloys to steels, for welding clad side of Ni-Cu clad steel and for surfacing on steel parts for service against corrosion by sea water, chlorinated solvents, sulphuric acid and alkalis. Ideal for marine, chemical, food, dairy, and oil refining industries.
